Kanstantsin [Surname]

AI Builder · Automation · Full-stack (React, TypeScript, Firebase, GCP)

Warsaw, Poland · Telegram: @[telegram] · [phone] · [e-mail] · Portfolio: kanstantsin-cv.pages.dev/?lang=en

PROFILE

I build and run production apps with AI (Claude Code). In two months I built MoneyPOD on my own: about 200 releases, 490+ automated tests, 4 companies use it every day. I also run SAINT Corp, a small studio (websites and Telegram bots for businesses), and a small transport company, so I know how service businesses work from the inside. Looking for a role in AI adoption and process automation.

EXPERIENCE

Founder and sole developer — MoneyPOD 10.2026 – now

SaaS: CRM and finance for Polish service companies · moneypod.pl

- Designed and shipped the whole product: orders, clients, quotes, invoices, crew payouts, reports, roles and permissions.
- Telegram: notification bot and a Mini App “Panel” for owners and crews; macOS app (Swift, Touch ID); PWA with push.
- GCP infrastructure: Cloud Run, Firestore, Cloud Scheduler, Secret Manager; backups, PITR, uptime and budget alerts.
- Release process: ~200 deploys with a no-traffic check, traffic switch and rollback; 360 tests + 133 security-rule tests.
- Client interviews, user-flow walkthroughs, priorities — from request to release.

Owner — SAINT Corp (studio) 10.2026 – now

Websites, Telegram bots and CRM for businesses · saintcorp.pl

- Business websites on Cloudflare Pages (e.g. kwadratserwis.pl, saintcorp.pl): multilingual, request form straight into the CRM, domain, DNS, Search Console.
- Multi-company Telegram bot engine (Node.js, Cloud Run, Firestore, encrypted tokens): website leads arrive in Telegram.
- Internal automation: a bot that collects team ideas, local transcription (whisper.cpp) and a digest written by a scheduled AI task.

Owner — transport company [from – to]

- Orders, crews and payouts; this experience became the base of MoneyPOD.

SKILLS

AI & automation: Claude Code, prompting, Telegram bots, webhooks, REST API, scheduled jobs

Backend & cloud: Node.js, Firebase (Auth, Firestore, rules), GCP Cloud Run, IAM

Frontend: React, TypeScript, Tailwind, HTML/CSS, PWA

Tools: Git/GitHub, automated testing, Cloudflare (Pages, DNS)
